Advanced BioChemicals (ABC) provide high quality and reproducible super-paramagnetic beads, consisted of a uniform solid core consisting of iron oxide clusters and hydrophilic functionalized cover layer, which are superior tools to purify biomolecules such as DNA, RNA and various proteins, etc.

Advanced BioChemicals (ABC) magnetic beads have several advantages over similar products:

- Solid core with iron oxide clusters – Fast magnetic response, fast separation;
- Excellent hydrophilicity – High binding specificity, low non-specific binding, excellent extraction effect;
- Nano-scale – Large surface area, superior efficiency in isolation and purification of molecules;
- Monodisperse magnetic beads – Easy disperse, long-lasting suspension stability.

Advanced BioChemicals (ABC) magnetic beads do give you very good experiences:

- High stability – DNA and RNA are very stable during the extraction process;
- High yield and high purity – 1-10 μ g DNA can be extracted from 200 μ l of whole blood with OD260/280 = 1.6-1.9 and OD260/230 > 2.0;
- Save lots of time – Isolate DNA or RNA in 20-30 min;
- Convenience and Eco-friendly – Whole process is performed at room temperature; No hazardous organic solvents;
- Biosafety – Cell lysis, protein deactivation, virus and bacteria are deactivated at the first step;
- Automation – no liquid-liquid mixing and separation process; therefore, the whole process can be easily automated.

Advanced BioChemicals (ABC) provide DNA/RNA purification magnetic beads, protein purification magnetic beads and functional magnetic beads. Advanced BioChemicals (ABC) also provide custom magnetic beads synthesis services on a variety of affinity coupled or structurally modified Nano-sized paramagnetic beads for covalently binding with proteins or antibodies. As a manufacture of superior magnetic beads (OEM), Advanced BioChemicals (ABC) work closely with our collaborators to develop new magnetic beads products and applications depending on the custom requirement.
